

PARTS & SERVICE

Bearings

- Using your old casing, the bearing is centrifugally re-babbitted using all new “virgin” turbine grade Babbitt. Our repair process offers a remanufactured bearing from the original OEM prints. All internal dimensions are to our specifications.
- Bond integrity is checked by certified Level II trained technicians.
- Emergency turn around times in less than a week.
- The best approach to minimal downtime is to have a new spare and remanufacture the failed bearing for a future spare.

Emergency Seals

Reduce Down Time!

- Your original seal is re-toothed. This can be preformed in less than a week with emergency service available on weekends and holidays.
- It's better to have a new spare, but if you don't – this is the fastest alternative.

Customer Service is basic...

We provide parts and service to keep your equipment productive.
