

PARTS & SERVICE

Check our web page
for the latest updates
and upgrades.

**Microprocessor
Sync-Rite**

**This updated Sync-Rite will replace all
earlier models.**

- Sync-Rite - controls main field application on the Synchronous Motor. Electric Machinery updated and upgraded its internal circuitry.
- Microprocessor is now used to determine when field application should occur.
- Speed pot has been eliminated.
- Standard factory field application speed set to 95%.
- Red and Green status indication lights included to improve troubleshooting capabilities.

- Models with connector other (terminal strip) than (standard) Winchester can also be upgraded but will require special order to match your need.
- Electric Machinery also offers Diode Wheel tester and "Sync-Rite" and "Sync-Rite Filter" tester.
- Both will help you quickly and easily check all diode wheel components without the need of removing them from their location.

Customer Service is basic...

We provide parts and service to keep your equipment productive.
