

PARTS & SERVICE

Split Rectifier Wheel

The split rectifier wheel is an option on all steel type "G Line" rectifiers with speeds of 450 rpm or less.

Typical Motor Applications: Engine & Pedestal Type

Split Joint

Enclosure Modification

COMPLETE ASSEMBLY

The Split Rectifier Wheel offers two significant benefits

- All components face outward for easier access and maintenance.
- The design allows removal without disassembly of the bearing and pedestal assembly.

Having an extra split rectifier wheel on hand reduces your down-time by ease of installation, having parts on hand, and limited disassembly to the motor. A modified enclosure may be an option for better access. Down time is expensive, consider purchasing a spare split rectifier wheel.

Customer Service is basic...

We provide parts and service to keep your equipment productive.
